

I would like to recommend a book that will help you see clearly the fallacy of Darwinian Evolution. *Darwin on Trial* by Phillip Johnson is a great book that clearly and convincingly shows its weaknesses. When you finish reading this book, you will wonder how anyone can believe in evolution. You will understand that those who subscribe to evolution do so for philosophical reasons, not because of scientific reasons or evidence. Phillip Johnson attacks Darwinism like a trial lawyer (he is a lawyer and teaches law at the University of California at Berkeley), and in the end Darwin's theory is shown to be unfounded due to a lack of evidence.
